

Attach virtual disk

Last Modified on 04.16.26

The *Attach virtual disk* action allows you to mount a virtual hard disk in a specific (empty) folder on devices.

General

Type *Attach virtual disk*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

The file that needs to be mounted on devices. For example:

Virtual disk

- **Windows:** VHD, VHDX or CimFS
- **macOS:** DMG – For macOS, the mount is read-only if the disk image format supports it. See `man hdiutil` for more information.

Mount point

The path where the virtual disk is mounted on devices. Target directory may exist, but needs to be empty.

Advanced

Context The level at which the action is executed, *User* or *Device*.

Network Credentials The network credentials from the credential store, which will be used to access the specified file on a network location. The option is available only for Windows.

Read-only With the local disk mounted as read-only, file changes are not allowed.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.

Supported platforms

Platform Supported
