Connect drive mapping

Last Modified on 2026-08-19

The *Connect drive mapping* action allows you to map a drive to easily access it from File Explorer/Finder without having to look for it or type its network address each time.

General	
Type	*Connect drive mapping*
Name	Give actions descriptive names that accurately convey what they do.
Drive	Specify which drive letter should be used for the mapping. This option is available only for Windows.
Path	The network path; for example `\\server\share`. This option is available for Windows and Mac.

Advanced	
Context	The level at which the action is executed, *User* or *Device*.
Network credentials	Specify which network credential set will be used for SSO purposes. The option is available only for Windows.
Persistent	If selected, the drive mapping will persist after a device reboot. The option is available only for Windows.

Filters
Define conditions under which the action is executed. For more information, see Filters.

Agent
It requires the Agent to be running.

Supported platforms

Platform	Supported
Web	No
Windows	Yes
macOS	Yes
