

Delete registry key

Last Modified on 04.16.26

The *Delete registry key* action allows you to delete a registry key from devices.

General

Type *Delete registry key*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

Key For example `HKLM\My\Registry\Key`.

Advanced

Context The level at which the action is executed *User*, *Device* or *Elevated user*. For elevated user, the action will be executed under the current user, but it's granted temporary permission to modify the local system.

Use 32bit registry key on 64 bit systems If selected, Application Workspace first checks 32-bit registry locations for the specified registry key. If the registry key isn't found, it searches 64-bit locations.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.
