

Detach virtual disk

Last Modified on 04.16.26

The *Detach virtual disk* action allows you to unmount a previously mounted virtual hard disk.

General

Type *Detach virtual disk*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

The file that needs to be detached from devices. For example:

Virtual disk

- **Windows:** VHD, VHDX or CimFS
- **macOS:** DMG

Mount point Specify the path that needs to be unmounted, if the disk is mounted on several locations. Use * to unmount all paths.

Advanced

Context The level at which the action is executed, *User* or *Device*.

Network Credentials The network credentials from the credential store, which will be used to access the specified file on a network location. The option is available only for Windows.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.
