

Disconnect drive mapping

Last Modified on 04.16.26

The *Disconnect drive mapping* action allows you to disconnect a mapped drive.

General

Type *Disconnect drive mapping*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

Drive Specify which drive letter should be disconnected. This option is available only for Windows.

Path Specify which network path should be disconnected. This option is available only for macOS

Advanced

Context The level at which the action is executed, *User* or *Device*.

Force If this option is selected, the mapped network is disconnected even if it is in use.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.

Supported platforms
