

## Import uploaded registry file

Last Modified on 04.16.26

The *Import uploaded registry file* action allows you to merge a registry file from the Content Store, with the local device registry.

### General

**Type** Import uploaded registry file

**Name** Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

**File** Select the .reg file to import.

### Advanced

**Context** The level at which the action is executed *User*, *Device* or *Elevated user*. For elevated user, the action will be executed under the current user, but it's granted temporary permission to modify the local system.

**Use 32bit registry key on 64 bit systems** If selected, Application Workspace first checks 32-bit registry locations for the specified registry key. If the registry key isn't found, it searches 64-bit locations.

### Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

#### Agent

It requires the Agent to be running.

## Supported platforms

### Platform Supported

Web No

WindowsYes

macOS No
