

Install package

Last Modified on 04.16.26

The *Install package* action allows you to install a package from the actions of another package. This could be useful when you want to install a dependency for example.

General

Type *Install package*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

Package Select the Liquit Workspace package you wish to install.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It can be executed on the server (limited functionality) and therefore does not require the agent to function.

Supported platforms

Platform Supported

Web Yes

Windows Yes

macOS Yes
