

Install uploaded file

Last Modified on 04.16.26

The *Install uploaded file* action allows you to upload a file to the Content Store and have that file be placed on devices in the destination specified.

General

Type *Install uploaded file*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

File Select the file to upload.

Destination The destination path where you want to place the file. End the destination path with a (back)slash to indicate a directory (the uploaded filename will be appended), otherwise the agent will assume the destination is a file.

Advanced

Context The level at which the action is executed, *User* or *Device*.

Fetch content on demand If this option is selected, the content is downloaded only when the action is being executed; the content is not prefetched at the distribution stage.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.

Supported platforms
