

Install uploaded Mac App

Last Modified on 04.16.26

The *Install uploaded Mac App* allows you to upload a macOS App to the Content Store and install the app on devices from the content repository.

General

Type *Install uploaded Mac App*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

File Select the file which needs to be installed. When specifying an archive as source, all the top-level directories ending with ".app" will be copied. Supported formats are pkg / mpkg / dmg / zip / tar / tar.gz / tar.bz2 / tar.xz / tgz / txz / gzip / bzip2 / Tbz2

Choice changes XML (Only for PKG) The installer choices for a PKG; see section 8 of the macOS man page installer for more information about the XML.

Advanced

Context The level at which the action is executed, *User* or *Device*.

Fetch content on demand If this option is selected, the content is downloaded only when the action is being executed; the content is not prefetched at the distribution stage.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.
