

## Launch package

Last Modified on 04.16.26

The *Launch package* action allows you to launch a package from the actions of another package.

### General

**Type** *Launch package*

**Name** Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

**Package** Select the package to be launched.

**Shortcut** Insert the name of shortcut you want to attach to the package; if the field is left empty, the primary shortcut will be used. Shortcuts can be set only in Launch type actions/action sets. For more information, see [Packages](#).

### Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

#### Agent

It can be executed on the server (limited functionality) and therefore does not require the agent to function.

## Supported platforms

### Platform Supported

Web Yes

Windows Yes

macOS Yes
