Recast

Reboot

Last Modified on 2026-11-19

The **Reboot** action allows you to perform a reboot on devices. When this action is run during deployment, the deployment will continue with the next action or package after reboot.

NOTE: To perform this action, the Application Workspace Agent must be running.

After a deployment runs, the device needs a reboot to get the Agent out of the running deployment state.
The Agent configuration file is reverted to the previous state.
The Application Workspace Launcher is not available while deploying.

General	
Type	Reboot
Name	Enter a descriptive name for the action
Time out	The time in seconds to wait before a reboot (0 to 65535)

Wait for User Input Before Reboot
To delay a reboot until the end user clicks a specific button, you'll need to add a Prompt User action.

Filters
Define conditions under which the action is executed. For more information, see Filters.
