Set registry value

Last Modified on 2026-08-25

The **Set registry value** action allows you to set a registry value on devices. This action requires a running agent.

General Settings

Type	*Set registry value*
Name	Give actions descriptive names that accurately convey what they do.
Key	For example `HKLM\My\Registry\Key`.
Name	The name of the registry key.
Type	The type of registry value: SZ, DWORD, QWORD, MULTI_SZ, EXPAND_SZ, BINARY
Value	The value of the registry key. NOTE: For a DWORD type, set the value as a binary – it will be converted to a hexadecimal value

Advanced	
Context	The level at which the action is executed *User*, *Device* or *Elevated user*. For elevated user, the action will be executed under the current user, but it's granted temporary permission to modify the local system.
Use 32bit registry key on 64 bit systems	If selected, Application Workspace first checks 32-bit registry locations for the specified registry key. If the registry key isn't found, it searches 64-bit locations.

Filters
Define conditions under which the action is executed. For more information, see Filters.
