Set variable

Last Modified on 2026-09-24

The *Set variable* action allows you allows to dynamically change an existing Application Workspace variable or create new ones.
The resulted variable exists only temporarily until the action is executed; it is not saved anywhere, and it is displayed only in the package you configured it. After the action is executed, the variable is discarded.

General	
Type	*Set variable*
Name	Give actions descriptive names that accurately convey what they do.
Variable	The name of the Application Workspace variable.
Value	The value of the Application Workspace variable.
Sensitive	If this option is selected, the variable is not logged in the log file and it is hidden on Application Workspace UI.

Filters
Define conditions under which the action is executed. For more information, see Filters.

Agent
It requires the Agent to be running.
