

Skip action

Last Modified on 04.16.26

Skip action allows you trigger an error message or skip the current action set(s) or the entire package. This is useful in combination with filters to easily stop further execution if criteria are not met, instead of having to apply the same filters on every action.

General

Type *Skip action*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

Choose what happens when the the filters are not met:

- Action**
- *Error* – display an error message.
 - *Skip action set* – skip the current action set to which this Prompt user action belongs.
 - *Skip action sets* – skip all action sets of the same type as the one to which this Skip action belongs.
 - *Skip package* – stop processing the current package without an error.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.
