

Start Windows App

Last Modified on 04.16.26

The *Start Windows App* action allows you to start a registered Windows App.

General

Type *Start Windows App*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

Package

Family Name The Family Name of the Windows App package which needs to be started.

Name

Application Id The name of the application that needs be started within the package. This is generally "App" for AppX packages, for MSIX is the name of the executable within the package without the .exe extension.

Arguments Insert the arguments for the application

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.
