

Unset environment variable

Last Modified on 04.16.26

The *Unset environment variable* action allows you to clear an operating system environment variable. This action is not persistent on macOS and changes are lost after a reboot.

General

Type *Unset environment variable*

Name Actions are easier to comprehend and manage over time when they have a suitable name that accurately expresses what they do.

Variable For example `NUMBER_OF_PROCESSORS` for a Windows OS

My data

is a list of values If you enable this option, you can unset one or more entries from the variable, when your variable is an array.

Separator Specify the separator used in a concatenated environment variable, so that it is parsed correctly.

Insert the value you want to unset from the variable. In case you enable the **My data is a list of values** option, you can specify which entry of the variable array you want to unset. For example Path:

Value

`c:\Windows;C:\Temp;c:\Program Files\` Value `C:\Temp` New path: `c:\Windows;c:\Program Files\` You can unset multiple entries, by using the ";" separator.

Advanced

Context The level at which the action is executed, *User* or *Device*.

Filters

Here you can define conditions which determine if the action will be executed. For more information, see [Filters](#).

Agent

It requires the Agent to be running.
