

## Device name

Last Modified on 04.16.26

Use the *Device name* filter to create a rule based on strings related to names of devices. For example, you can include devices which start with a certain string. Or, if your devices have names that start with a certain tag that identifies the department, you can easily use this filter include or exclude them.

### General

**Type** *Device name*

**Compare** *Equal, Not equal, Contains, Doesn't contain, Starts with, Ends with*

**Value** For example: DEVICE

### Agent

It requires the Agent to be running.
