

Network ping

Last Modified on 04.16.26

Use *Network ping* to filter based on the reachability of a hostname or network address on an Internet Protocol network.

General

Type *Network ping*

Host For example
server.domain.net

Reachable *Yes, No*

Advanced

Context The level at which the action is executed, *User* or *Device*

Ping Timeout a ping request in milliseconds; increasing the timeout can negatively impact the refresh time when the timeout host is unreachable

Ping Number of ping attempts before considering the host unreachable; increasing the attempts can negatively impact the refresh time when the host is unreachable

Agent

It requires the Agent to be running.
