

Package available

Last Modified on 04.16.26

Use *Package available* to filter based on the availability of a release of a dependent package on devices.

General

Type *Package available*

Package Dependent package

- *Latest release* checks if the latest known version of the dependent package is available on devices.
- *Distributed* checks if the dependent package was already distributed on devices. Note that it is not mandatory for the dependent package to have a Distribute type of action set or action configured. You can make any type of configuration that distributes the targeted package.

Release

- *Installed* checks if the dependent package was already installed on devices. Note that it is not mandatory for the dependent package to have a Install type of action set or action configured. You can make any type of configuration that installs the dependent package.
