

Package distributed

Last Modified on 04.16.26

Use *Package distributed* to filter according to whether a dependent package was distributed or not on devices, and if the latest or previous releases were distributed.

General

Type *Package distributed*

Package Dependent package

- *Latest release* checks if the latest known version of the dependent package was distributed on devices.
- *Any release* checks if any release of the dependent package was distributed on devices.
- *Not distributed* checks if the dependent package is not distributed on devices.

Distributed state

Note that it is not mandatory for the dependent package to have a Distribute type of action set or action configured. You can make any type of configuration that distributes the dependent package.

Agent

It requires the Agent to be running.
