

## Platform user language

Last Modified on 04.16.26

The *Platform user language* does not filter devices, but rather users based on the display language of the operating system.

To filter by system locale of devices, see [Platform language](#).

### General

**Type** *Platform user language*

**Compare** *Equal, Not equal, Contains, Doesn't contain, Starts with, Ends with*

**Value** For this filter you must insert the language ISO code (ISO-639) followed by a hyphen (-) followed by the country ISO code (ISO-3166). E.g. en-US, de-DE or fr-FR. Note that the operator is case-sensitive in this case.

### Agent

It requires the Agent to be running.

Note that a device has only one system locale (Platform language) but can have multiple display languages (Platform user language) configured for different users accessing the same device.

You can view the display language of a user session on the local device in [User Portal](#) > [Diagnostics](#) > [User](#) > [Local session](#) > [Language](#).

## Supported platforms

### Platform Supported

Web Yes

Windows Yes

macOS Yes
