

Registry key exists

Last Modified on 04.16.26

Use *Registry key exists* to filter based on the existence (or absence) of a registry key on devices.

General

Type *Registry key exists*

Key For example

HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft

Exists *Yes, No*

Advanced

Context The level at which the action is executed, *User* or *Device*

Use 32bit registry key on 64 bit systems If selected, Application Workspace first checks 32-bit registry locations for the specified registry key. If the registry key isn't found, it searches 64-bit locations.

Agent

It requires the Agent to be running.

Supported platforms

Platform Supported
