

URL scheme exists

Last Modified on 04.16.26

Use *URL scheme exists* to filter according to whether a certain URL scheme is installed and activated on the devices. This allows you to validate upfront if a certain type of URL is supported. For example, to validate if a VMware Horizon Client is installed, you can check if the URL scheme "vmware-view" is available for "vmware-view://host/pool" URLs.

General

Type *URL scheme exists*
