

WMI query count

Last Modified on 04.16.26

Use *WMI query count* to filter based on the number of expected results of a WMI (Windows Management Instrumentation) query you run on devices.

General

Type *WMI query count*
Path The WMI namespace that contains the class you want to query
Query The query you want to run
Compare *Equal, Not equal, Greater than, Less than*
Value Number of expected results

Agent

It requires the Agent to be running.

Supported platforms

Platform Supported

Web No
Windows Yes
macOS No

Example

The following query detects multi monitor setup:

Path *root\cimv2*
Query *SELECT * FROM Win32_DesktopMonitor*
Compare *Greater than*
Value *1*
