

Okta

Last Modified on 04.22.26

The Okta connector requires an Access Manager license.

This connector type allows you to setup a connection to Okta to import the applications defined there as ready to use applications within Application Workspace for distribution.

Prerequisites

- The domain name of the Okta tenant you wish to use.
- An application token from Okta to use for identification. To generate the Okta token, follow the instructions provided by the [Okta Developer guides](#).

If the connector is not used for some time, the token can be invalidated by Okta.

For more information about the [Overview](#), [Entitlements](#), [Synchronization Profile](#), [Releases](#) and [Managed packages](#) screens, see [Overview](#).

Settings screen

Okta Domain – The domain name of the Okta tenant, for example `liquid.okta.com`.

Token – The token that will be used to authenticate to Okta.
