

VMware Horizon

Last Modified on 04.16.26

The Release and Patch Management license is required for this connector.
For advanced scenarios the Access Manager license is required.

The VMware Horizon connector allows you to establish a connection to a VMware Horizon environment. The VMware Horizon connector allows you to import Horizon applications and desktops as ready to use applications within Application Workspace for distribution.

SSO can be enabled with Application Workspace when using a Unified Access Gateway with True SSO. See [VMware Horizon with True SSO](#) for more information about how to set up SSO with Access Manager.

For more information about the [Overview](#), [Entitlements](#), [Synchronization Profile](#), [Releases](#) and [Managed packages](#) screens, see [Overview](#).

Settings screen

This page contains all information on how to connect to your VMware Horizon server.

VMware Horizon

URL – The URL to the VMware Horizon Connection Servers (REST API).

Username – The username used to connect to your Horizon server; read-only administrator account is required.

Password – The password used in conjunction with the username to connect to Horizon.

Pools – What type of pools you want to import, Applications and/or Desktops.

Package

Public URL – The URL used when someone connects through, for example the VMware Unified Access Gateway.

Shared authentication session – Whether or not the session is shared across browsers.

Native Client

Use Native Client – Use VMware Horizon Client when the Liquit Workspace Agent is used to launch the Horizon application or desktop.

Install dependency – Add an install dependency to the managed packages. This could be a package that installs the VMware Horizon Client, for example.

Web Client

Use Web Client – Use VMware Horizon Web Client to launch the Horizon application or desktop. It will be used only if the native client isn't available.

Browser – Specify which browser should be used to navigate to the VMware Horizon package. The following options are available:

- *Default* – the URL will be opened by the browser configured as default on devices.
- *Internet Explorer*
- *Firefox*
- *Chrome*
- *Opera*
- *Microsoft Edge*
- *Safari*
- *Application Workspace* – the URL will be opened using the Application Workspace browser.
