System Views

Last Modified on 2026-09-28

System views list

This list displays default system views, alongside any defined by you and other administrators within your zone.

Only zone-type views are shown; personal views are not included in this list and they can be accessed and edited only in the window where you created them.

Selecting multiple table rows

- Adjacent rows: Click on the first row, hold down the Shift key, click on the last row in the range
- Non-adjacent rows: Hold the Ctrl or Cmd key and click on each row you want to select
- Adjacent rows, using only the mouse: Click and hold the left mouse button on the first row, then drag the cursor up or down across the rows to highlight the desired ones

Table toolbar

To view the details of a view or edit it, double-click its entry or select the view and click the **Edit** button.

Views gives you control on how the table displays.
The default view contains all your view in alphabetic ascending order, and only a few columns: **Entity**, **Type**, **Name** and **Built-in**.
You can create your own personalized view of the table, by filtering the views or adding/deleting columns and clicking **Save as** in the **Views** drop-down.

Detailed view of a system view

See below the description of each screen in the detailed view of a system view, and what actions you can perform in each of them.

Overview screen

Only the zone type views can be edited, and only their name and description. The default views are read-only.
