

## System Views

Last Modified on 04.16.26

### System views list

This list displays predefined (default) views alongside the ones defined by you and other administrators within your zone. Only zone type views are shown; personal views are not included in this list and they can be accessed and edited only in the screen where you created them.

#### Selecting multiple rows from the table

- To select multiple adjacent rows, click on the first row, then hold down the Shift key and click on the last row in the range; all rows between will be selected.
- To select multiple non-adjacent rows, hold down the Ctrl key (or "Command" on Mac) and click on each row you want to select individually.
- To select multiple adjacent rows using the mouse only, click and hold the left mouse button on the first row, then drag the cursor up or down across the rows to highlight the desired ones.
- Selecting rows using only the keyboard is not possible.

### Table toolbar

To view the details of a view or edit it, double-click its entry or select the view and click the  **Edit** button.

 **Views** gives you control on how the table is displayed.

The default view contains all your view in alphabetic ascending order, and only a few columns: **Entity**, **Type**, **Name** and **Built-in**.

You can create your own personalized view of the table, by filtering the views or adding/deleting columns and clicking **Save as** in the drop-down menu of  **Views**.

### Detailed view of a system view

See below the description of each screen in the detailed view of a system view, and what actions you can perform in each of them.

### Overview screen

Only the zone type views can be edited, and only their name and description. The default views are read-only.
