Identity Providers

Last Modified on 2026-09-28

Identity providers (IDP's) are used to supply user identification to other applications in a single sign on (SSO) way.
For example, if a user is authenticated to the Application Workspace, and the user visits a website that is federated with the Application Workspace IDP, then the user doesn't have to authenticate again to the website, as the website can ask the Application Workspace IDP who the user is. The user will be granted access to the website with SSO which will provide the best end user experience.

Identity providers list

This list displays all identity providers currently available in the Application Workspace System.

Selecting multiple table rows

- Adjacent rows: Click on the first row, hold down the Shift key, click on the last row in the range
- Non-adjacent rows: Hold the Ctrl or Cmd key and click on each row you want to select
- Adjacent rows, using only the mouse: Click and hold the left mouse button on the first row, then drag the cursor up or down across the rows to highlight the desired ones

Table toolbar

To create a new identity provider, click on the **Create** button; to view the details of an identity provider or edit it, double-click its entry or select the identity provider and click the **Edit** button.

Views gives you control on how the table is displayed.
The default view contains all your identity providers in alphabetic ascending order, and only a few columns: **Name**, **Type** and **Enabled**.
You can create your own personalized view of the table, by filtering the identity providers or adding/deleting columns and clicking **Save as** in the drop-down menu of **Views**.
