Citrix StoreFront integration with Application Workspace

Last Modified on 2026-09-24

Regardless of the authentication method you choose when you configure the integration with Citrix StoreFront, the main requirement for all the scenarios below is to Configure the Citrix StoreFront connector.

Application Workspace supports the following integration scenarios with Citrix StoreFront:
- Scenario 1: Without federated authentication
- Scenario 2: StoreFront via NTLM/Kerberos authentication (legacy integration)
- Scenario 3: StoreFront SAML integration without ADC (NetScaler)
- Scenario 4: StoreFront via ADC (NetScaler) SAML integration

All scenarios support Citrix Receiver / Workspace and the HTML 5 client (HDX).
