Pair a zone

Last Modified on 04.16.26

1. In the **Zones** screen, click  **Pair zone**.
2. Enter the URL of the zone to pair with and its name. Enable the **Content**, **Managed** or **Connectors** options according to your needs.
3. After clicking **Confirm**, you are prompted to log in to the zone to which you want to pair the local Application Workspace Satellite Server. Use administrator credentials that have the "Create servers" privilege.
