

Receive email notifications for Application Workspace Setup Store managed package updates

Last Modified on 04.20.26

This article describes how to create scheduled tasks to receive e-mail notifications when updates are available for the managed application you've created through the Application Workspace Setup Store.

Configure the email settings

To receive email notifications from within Application Workspace, you first have to add an email server in **Manage > Mail Settings**:

Click **+ Create** in the table toolbar and configure all the necessary settings for this email server.

This email server is used by the scheduled tasks to send email messages. For more information, see [Mail Settings](#).

The screenshot shows a configuration page titled "Test the e-mail server" with a sub-header "Don't forget to use the **Test** option in the **Overview** screen, to see if the configuration is working correctly." The breadcrumb navigation is "Manage / System / Mail Settings / Application Workspace SMTP". Below the navigation, there are tabs for "Application Workspace SMTP", "Test" (highlighted with a red box), and "Remove". The "Test" tab is active, showing a form with the following fields: "Name" (containing "Application Workspace SMTP"), "Priority" (containing "2"), and "Description" (containing "Description"). There is a "Save" button at the bottom left of the form. On the left side of the form, there are three sections: "Overview" (selected), "Settings", and "Auditing". The "Overview" section has a green checkmark and the text "Enabled".

Create a scheduled task

1. Navigate to **Manage > Automation > Scheduled Tasks**.
2. Click **+ Create**.
3. In the **Create scheduled task** that opens, select the *Synchronize connector* type.
4. In **Settings**:
 - Select an existing Application Workspace Setup Store.
 - Select **Check for updates** action.
5. In **Summary**, leave the **Modify package after creation** selected and click **Finish**.
6. Navigate to **Notifications** and enable the notification and add one or more email addresses where Application Workspace should send detailed emails per managed package.
7. Navigate to **Schedule** and add a new schedule where you specify the desired frequency and time.

Recast

This is an example of how an update email notification looks like:

 APPLICATION WORKSPACE

Pending updates

Package	Resource	Version	Released
Isscv2_PLEdit 7 (x64)	PLEdit 7 (x64)	7.4.740	3/4/2025
Isscv2_PLEdit 7 (x86)	PLEdit 7 (x86)	7.4.740	3/4/2025

Task details

Name	Documentation
Status	Success
Completed At	3/18/2025 11:18:54 AM
Started By	Recast Software\ [redacted]
Started At	3/18/2025 11:18:47 AM
