

## Burp Suite Enterprise Edition

Last Modified on 04.16.26

Burp Suite Enterprise Edition can be installed silently using the following parameters we provide in the Setup Store wizard:

```
-q -c -varfile response.varfile
```

The `response.varfile` file is created automatically in the `C:\Program Files\burpsuite_enterprise\install4j` directory running a manual installation.

After running the installation, it needs to be copied to the directory in which the setup (e.g. `burpsuite_enterprise_windows-x64_v2023_2.exe`) is located.

For more information, see [Performing an unattended installation with Windows](#) on the Burp Suite Enterprise Edition documentation page.
