

ArGIS Maps for Office

Last Modified on 2026-05-21

If you want to Create an Application for ArGIS Maps for Office, there are some extra steps you have to take.

1. Download the application in the Application Workspace Setup Store then navigate to the downloaded file.

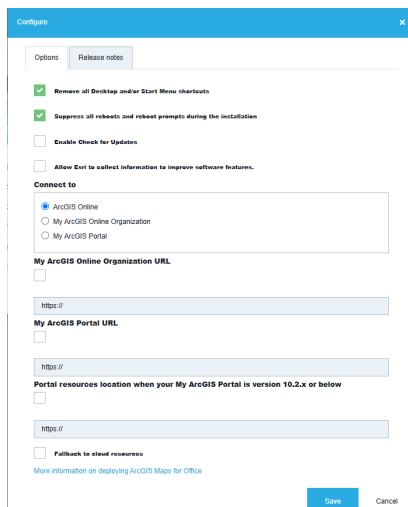

2. In Command Prompt, specify the directory in which you want to extract the MSI.

E.g.: `EsriMapsForOffice_x86_3.1_en.exe /extract c:\test`

This will extract the `Setup.msi` to the `c:\test` directory.

3. In Setup Commander, navigate to the 'Setup.msi' file, right-click and choose 'New Application'.

The ArGIS Maps Configuration Wizard will start and you can choose the settings you need.

The screenshot shows the 'Configure' dialog box for the ArGIS Maps Configuration Wizard. It has a blue title bar with the text 'Configure' and a close button. Below the title bar are two tabs: 'Options' (selected) and 'Release notes'. The 'Options' tab contains several settings:

- Remove all Desktop and/or Start Menu shortcuts
- Suppress all reboots and reboot prompts during the installation
- Enable Check for Updates
- Allow Esri to collect information to improve software features.

Under the 'Connect to' section, there are three radio button options:

- ArcGIS Online
- My ArcGIS Online Organization
- My ArcGIS Portal

Below these are three sections, each with a checkbox and a text input field:

- My ArcGIS Online Organization URL
- My ArcGIS Portal URL
- Portal resources location when your My ArcGIS Portal is version 10.2.x or below

At the bottom, there is a checkbox for Fallback to local resources and a link for [More information on deploying ArcGIS Maps for Office](#). The dialog box ends with 'Save' and 'Cancel' buttons.

To learn more, see [ArcGIS for Microsoft 365 Resources](#).
