

TI Connect CE

Last Modified on 2026-05-21

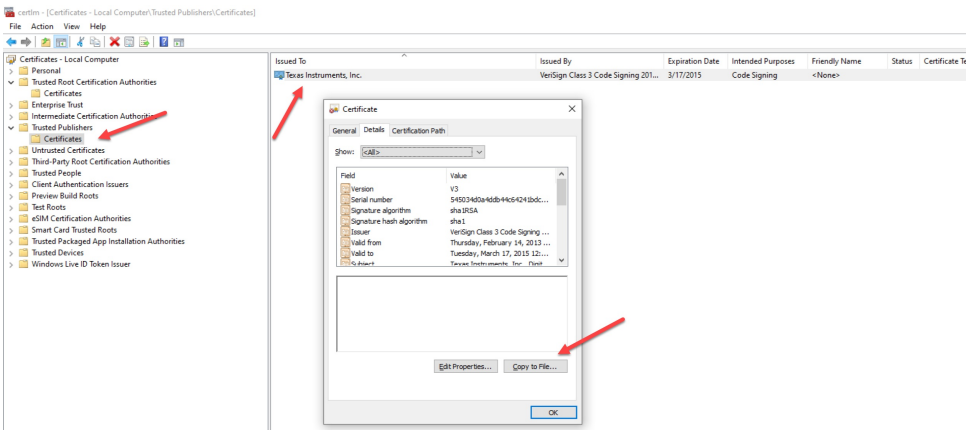

To silently install TI Connect CE, there are some extra steps you have to take.

To be able to do a silent install of TI Connect CE, you first have to install or inject the 'Texas Instruments Certificate'. You can obtain this certificate on a machine where TI Connect CE is installed.

Export the certificate:

1. Install TI Connect CE on a test-machine or VM.
2. Start certmgr.msc
3. Locate the TI certificate in the 'Trusted Publishers' -> 'Certificates' section.
4. Double-click the 'TI' certificate.
5. Click the 'Details' tab.
6. Click 'Copy to file'.
7. Accept the Wizard defaults and choose a location and filename for the certificate.
8. Copy the .cer file to a save place outside the test-machine.

Import the certificate:

1. On the machine or image where you want the certificate installed, open an elevated command prompt.
2. Type: `certutil -addstore TrustedPublisher [drive][path][certificate]` (E.g: `certutil -addstore TrustedPublisher c:\test\tesasinstruments.cer`)
3. You will see a message when the certificate is successfully installed.

Recast

```
Administrator: Command Prompt
C:\test>certutil -addstore TrustedPublisher c:\test\texasinstruments.cer
TrustedPublisher "Trusted Publishers"
Certificate "Texas Instruments, Inc." added to store.
CertUtil: -addstore command completed successfully.
C:\test>_
```

You can now do a silent install of TI Connect CE.
