

# Recast

## Adobe Creative Cloud

Last Modified on 04.16.26

Adobe apps and updates for versions of Adobe Creative Cloud earlier than 2019 are deployed via the [Creative Cloud Packager](#). Those later than 2019 are deployed via the [Adobe Admin Console](#).

The packages created through Adobe Creative Cloud can then be deployed to the client machines in your organization.

## Deploy via Creative Cloud Packager

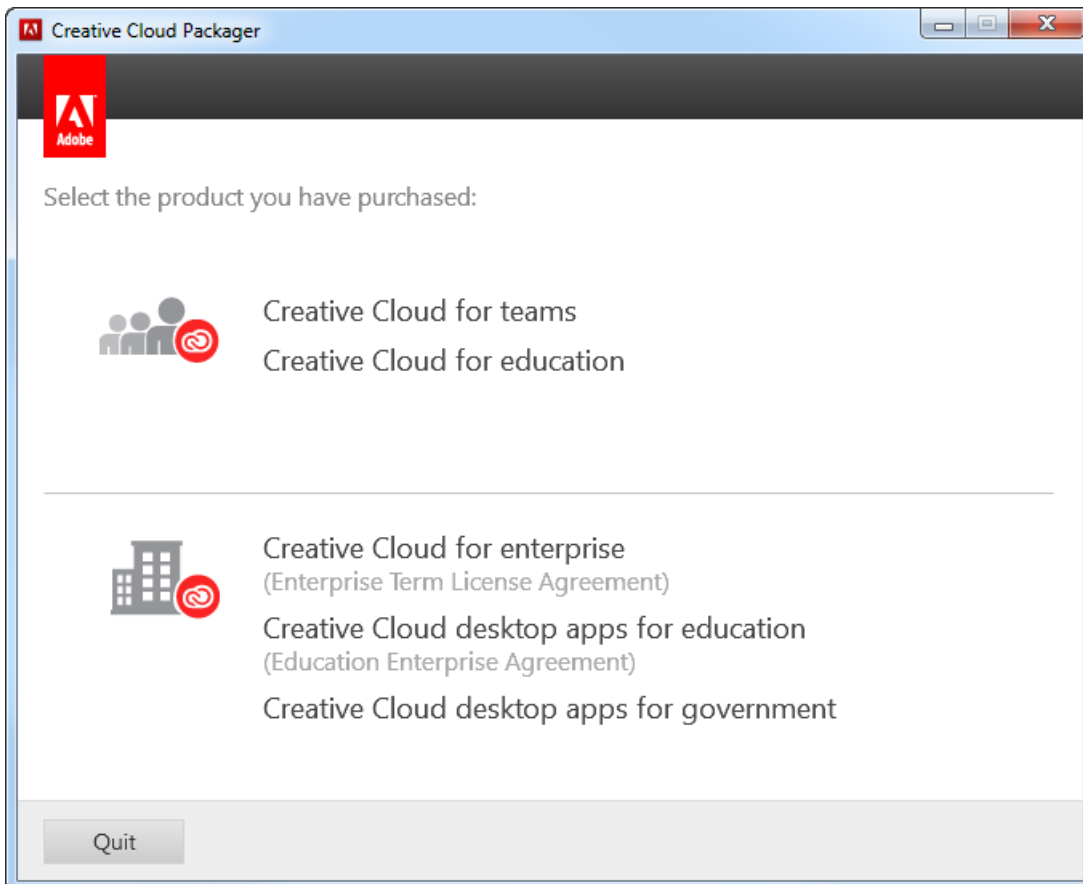

### Download

If you are a Creative Cloud for Teams customer, download the Adobe Creative Cloud Packager from the Team Admin Portal in Adobe Creative Cloud.

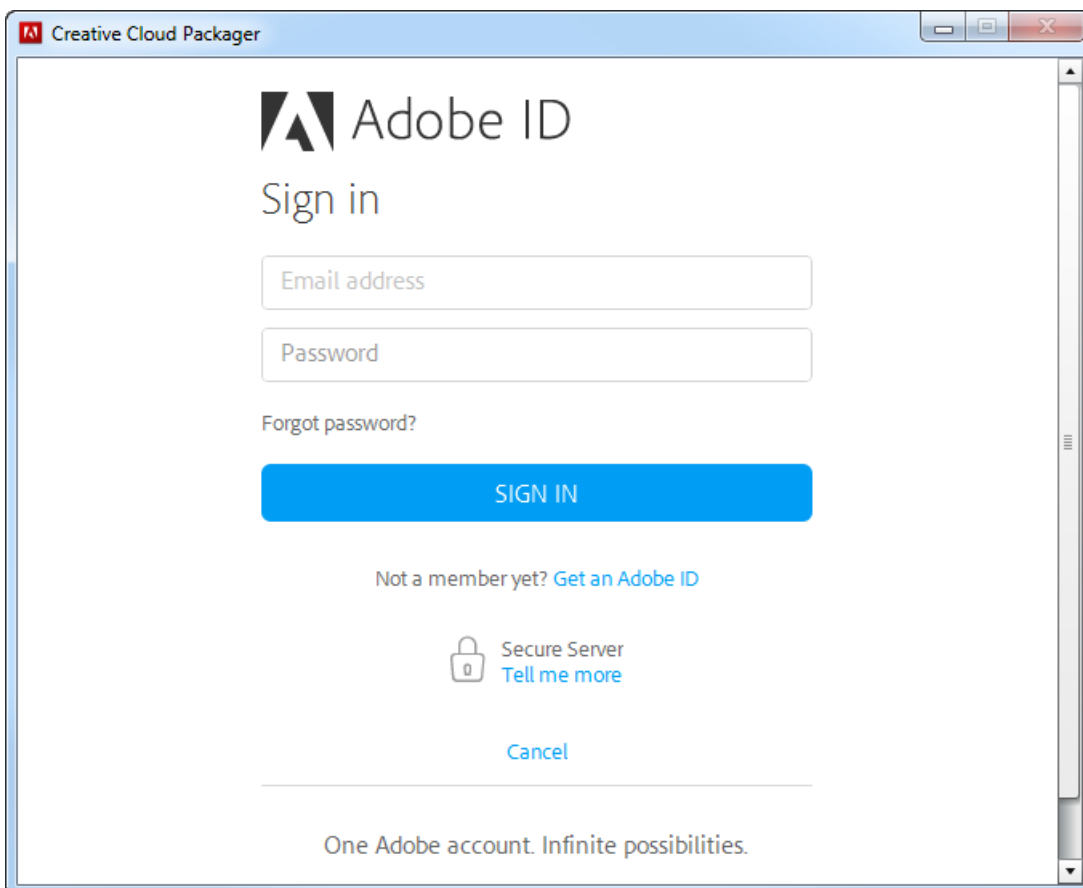

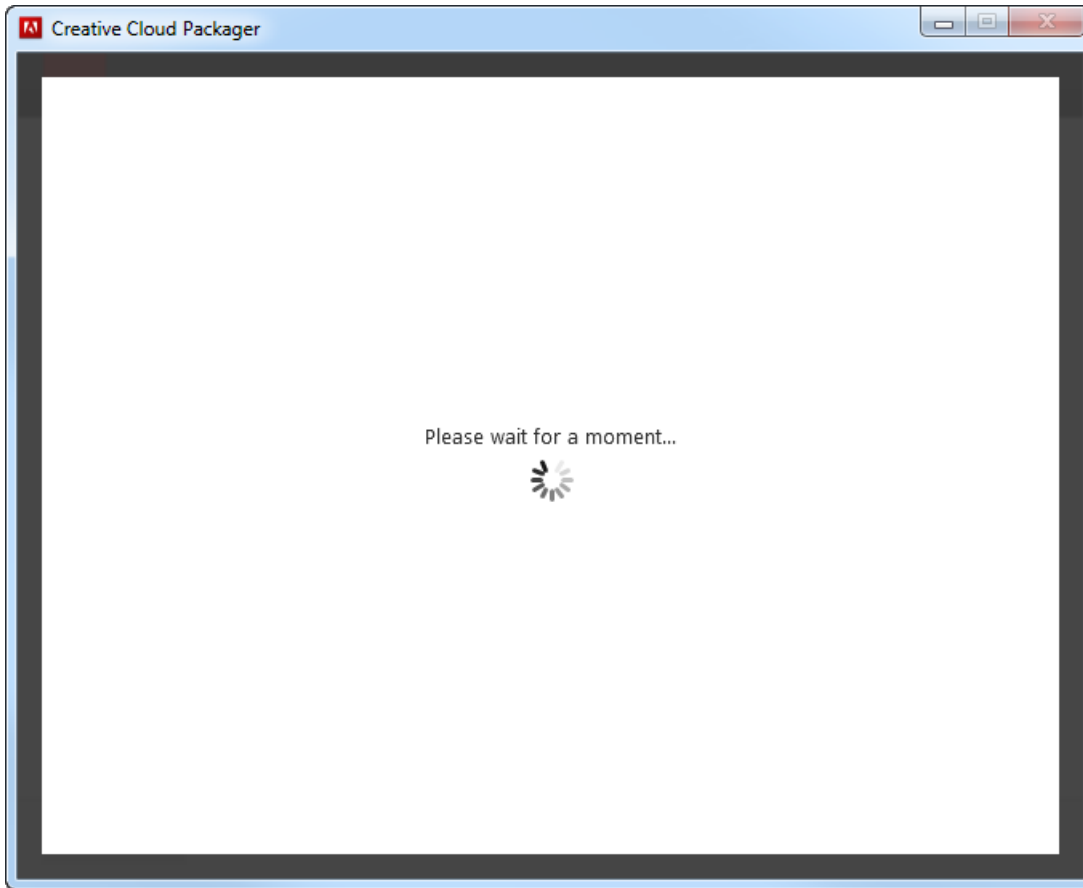

If you are a Creative Cloud for Enterprise customer, download the Adobe Creative Cloud Packager from the Adobe Licensing Website (LWS) or Enterprise Dashboard. You also get your enterprise license key from the LWS.

### Installation

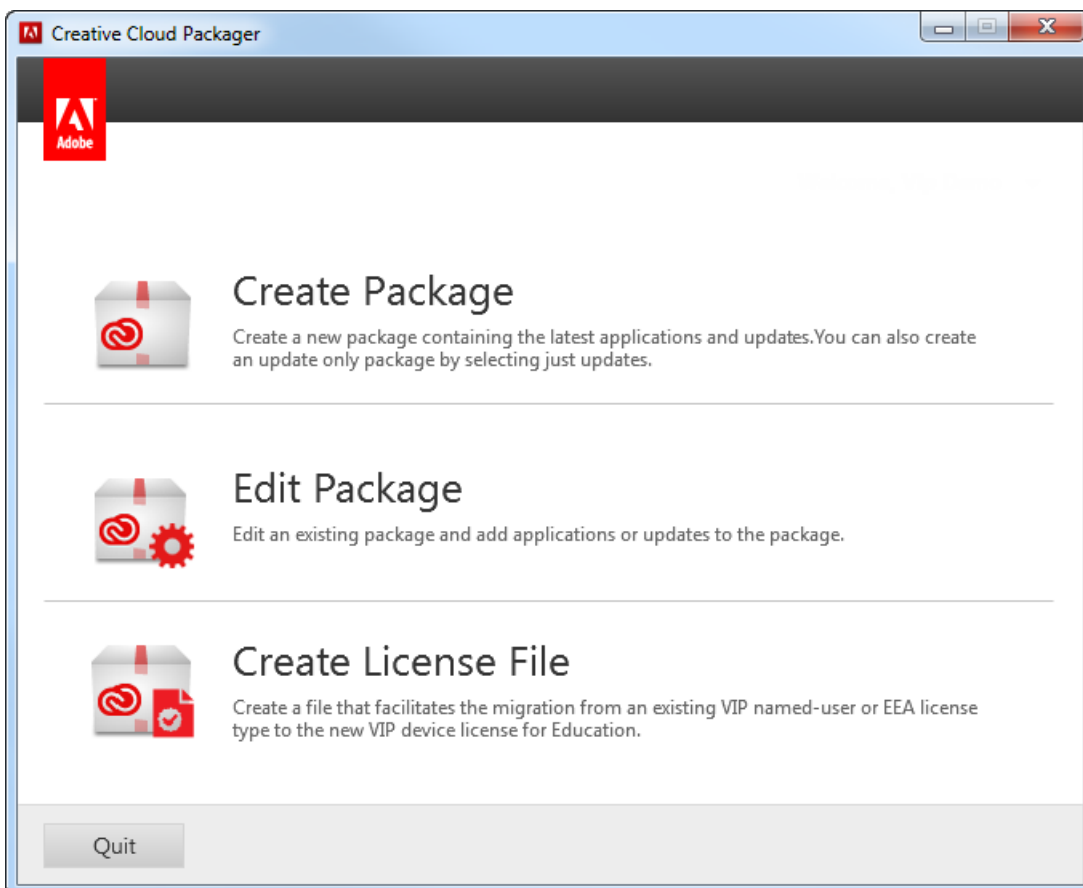

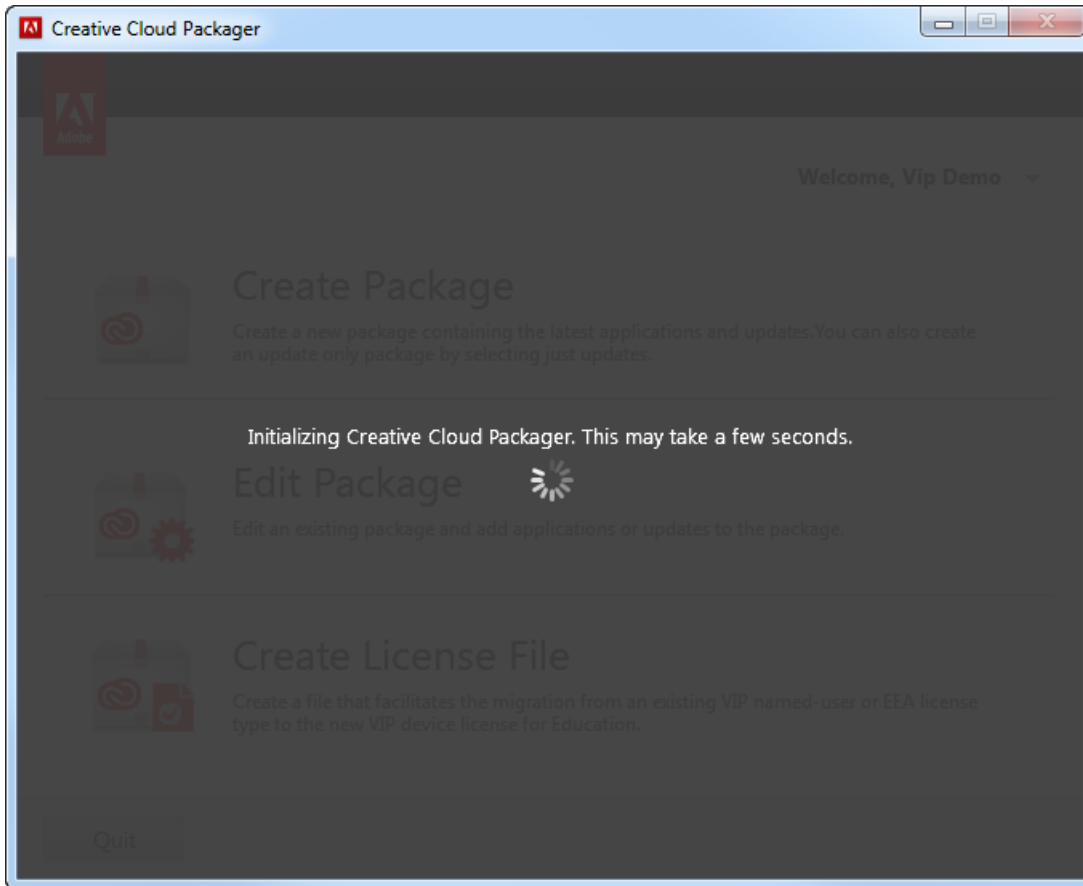

After downloading, double-click the install file on your computer (CCPLauncher.dmg for Mac OS; CCPLauncher.exe for Win) and follow the prompts:

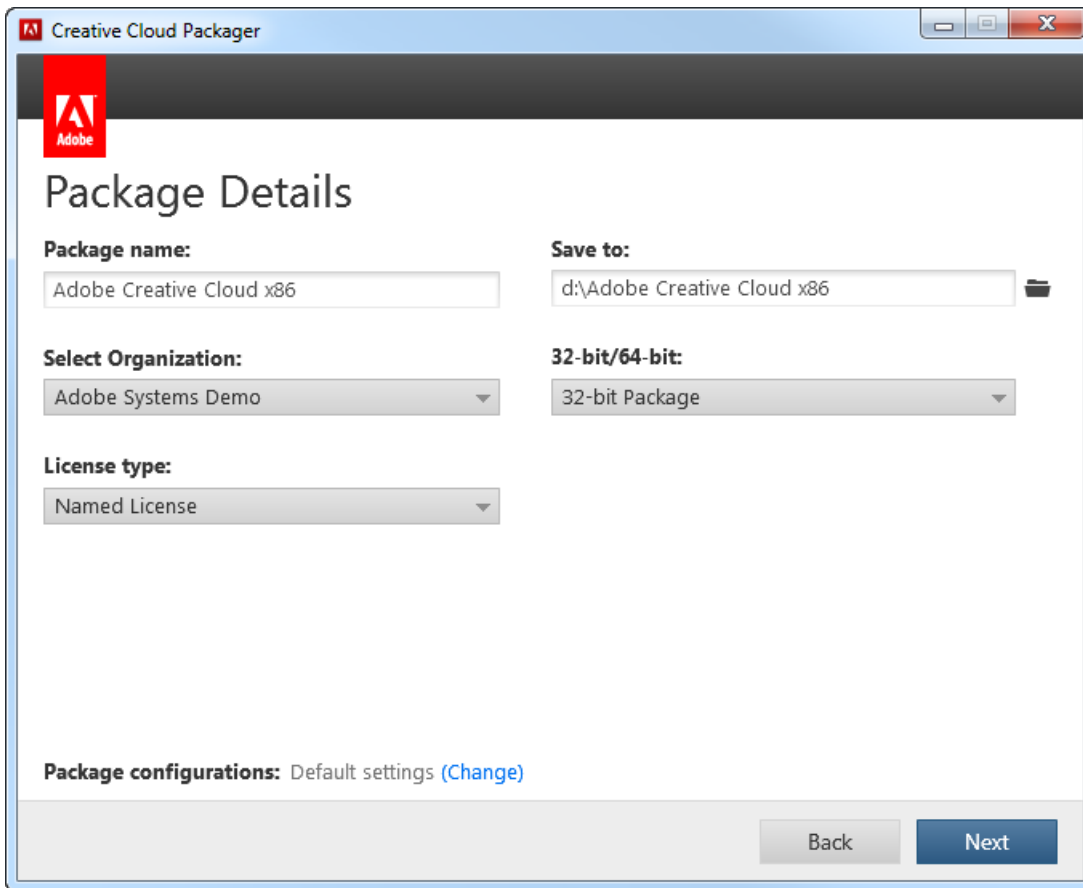

# Recast

# Recast

**Creative Cloud Packager**

## Package Details

**Package name:** Adobe Creative Cloud x86

**Save to:** d:\Adobe Creative Cloud x86

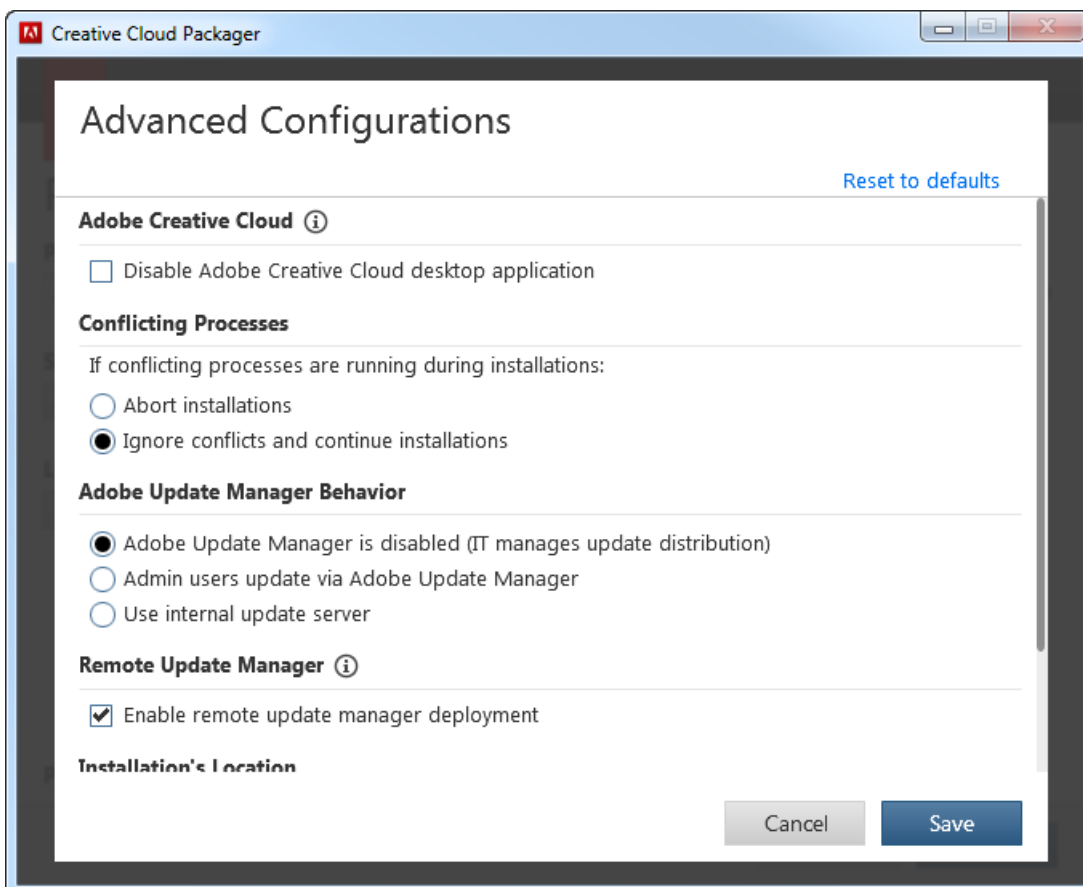

**Select Organization:** Adobe Systems Demo

**32-bit/64-bit:** 32-bit Package

**License type:** Named License

**Package configurations:** Default settings [\(Change\)](#)

**Back** **Next**

**Creative Cloud Packager**

## Advanced Configurations

[Reset to defaults](#)

**Adobe Creative Cloud** ⓘ

Disable Adobe Creative Cloud desktop application

**Conflicting Processes**

If conflicting processes are running during installations:

Abort installations

Ignore conflicts and continue installations

**Adobe Update Manager Behavior**

Adobe Update Manager is disabled (IT manages update distribution)

Admin users update via Adobe Update Manager

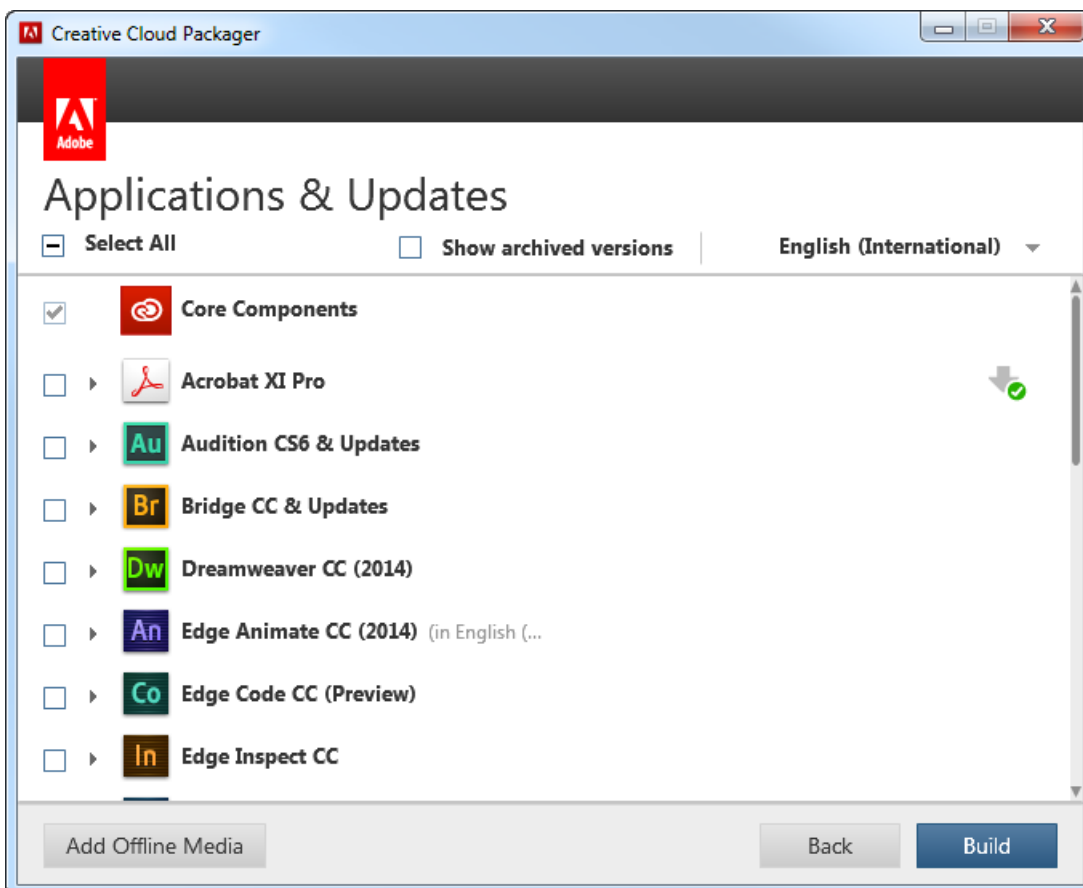

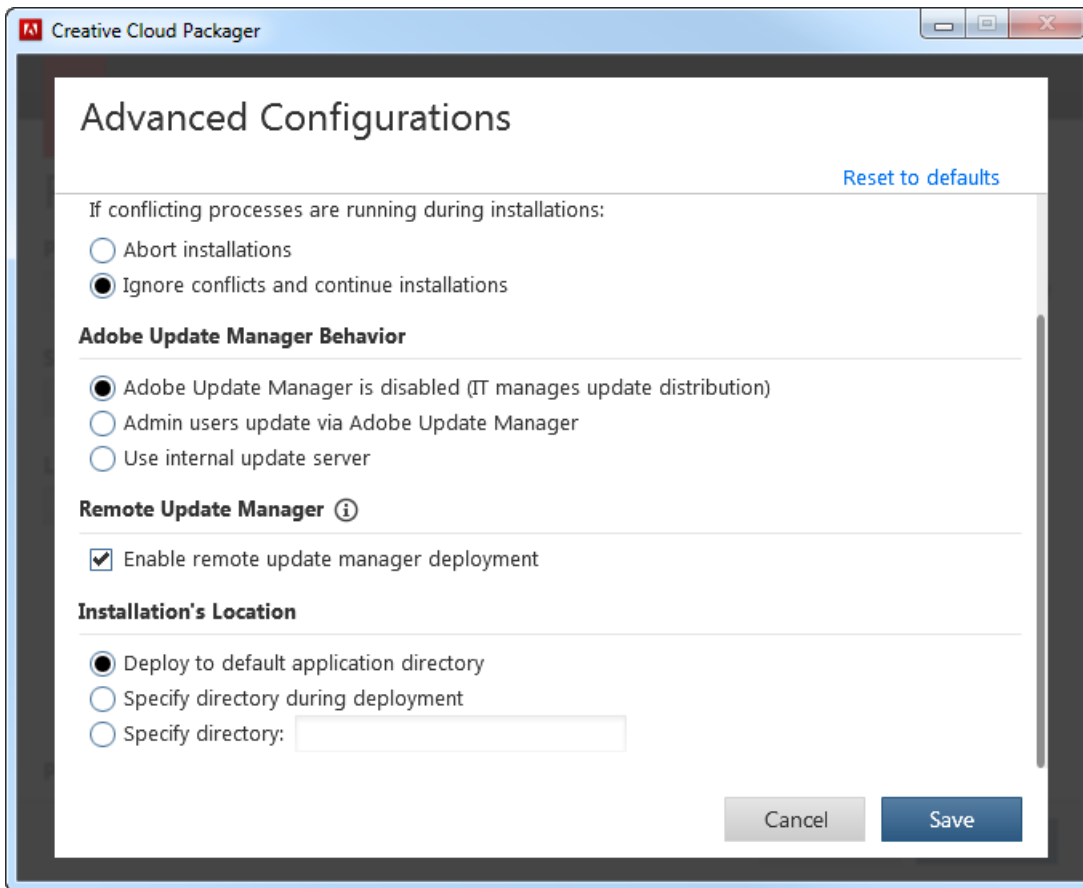

Use internal update server

**Remote Update Manager** ⓘ

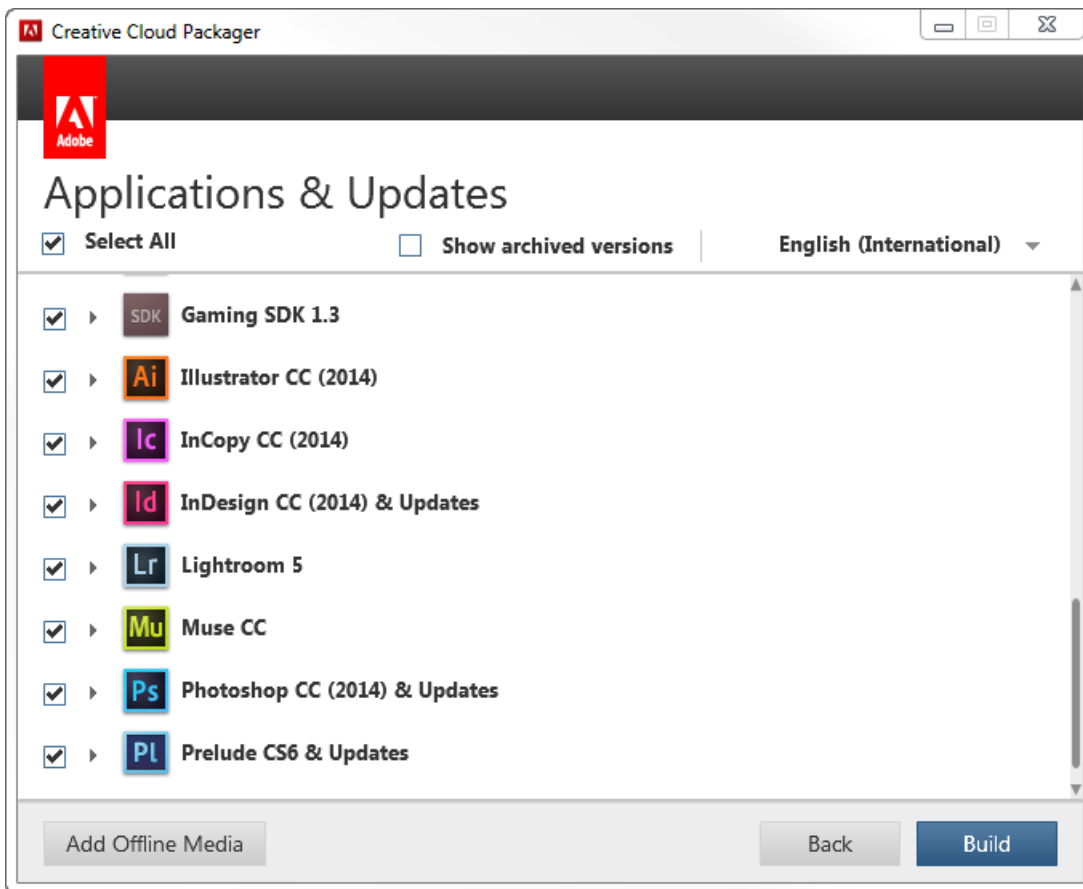

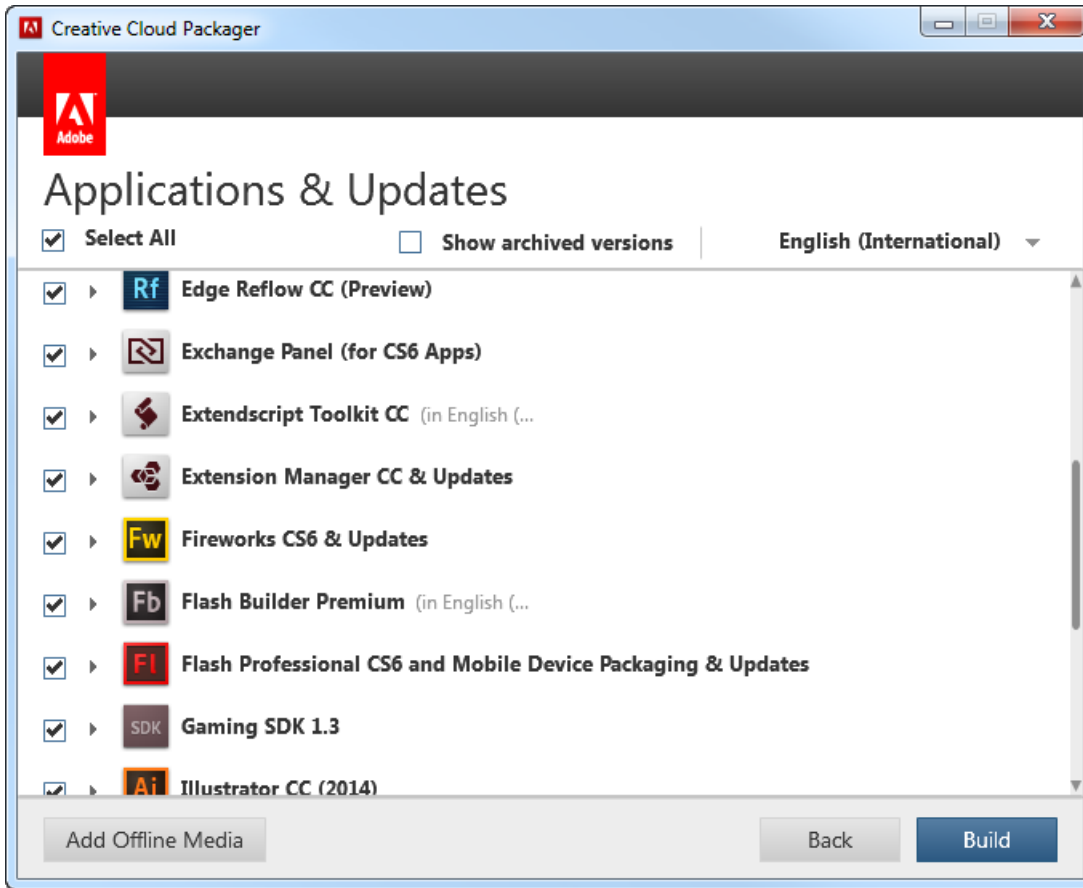

Enable remote update manager deployment

**Installation's Location**

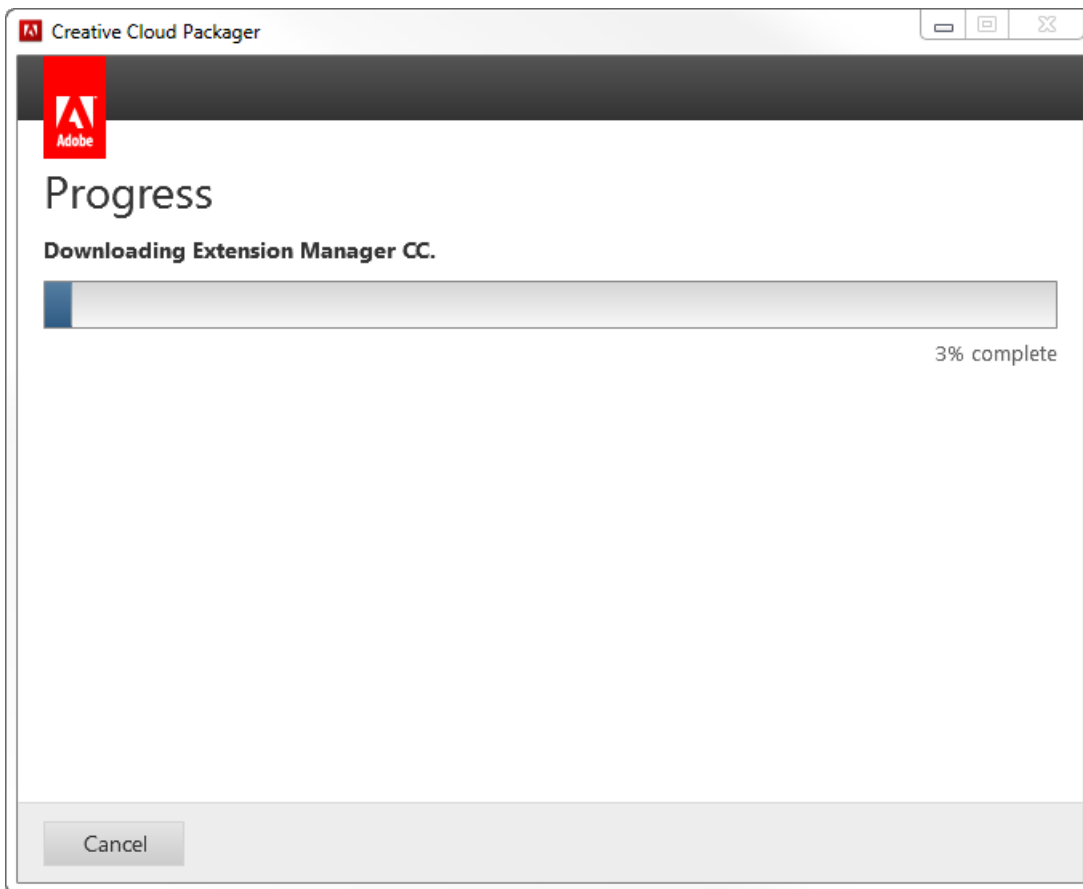

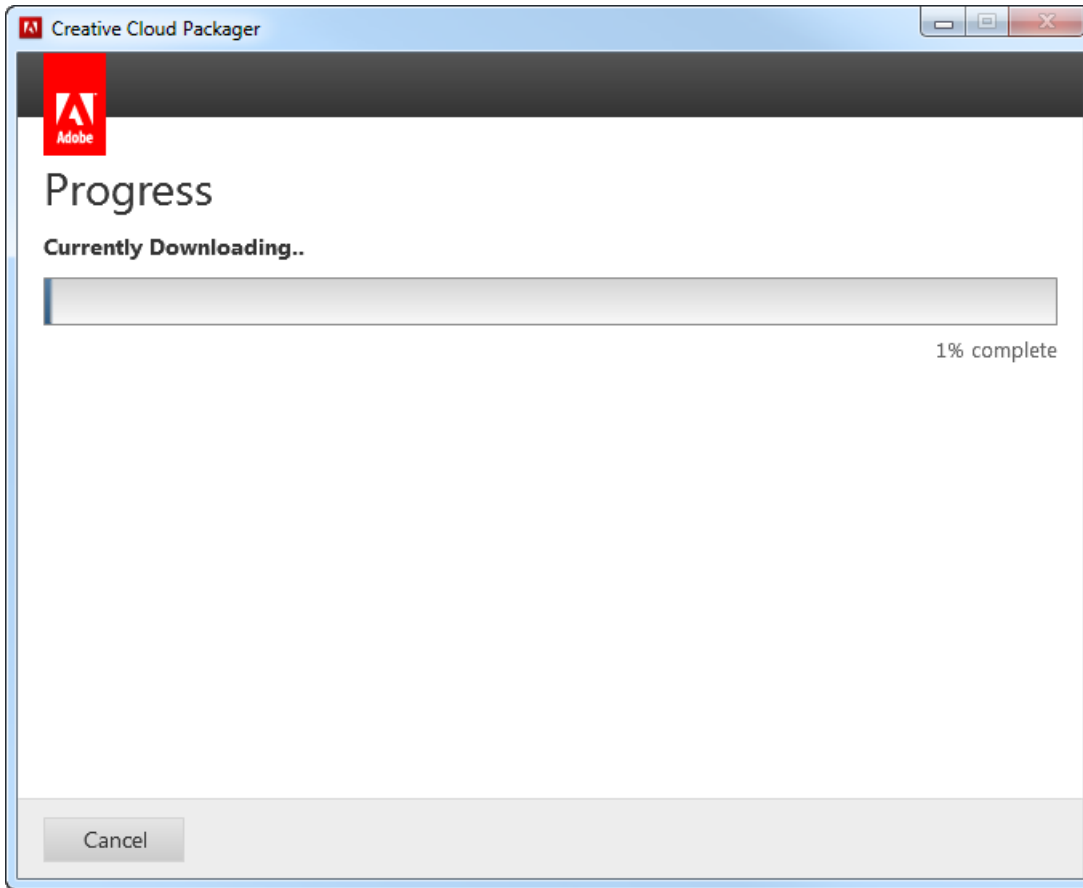

**Cancel** **Save**
