

Apple iCloud Control Panel

Last Modified on 2026-05-21

If you want to create an application for Apple iCloud, you can download it from the Setup Store.

Apple iCloud has a dependency though. You first need to download and install **Apple Application Support**. You can also find this in the Setup Store.

Application Workspace Setup Store Configuration Wizard

The screenshot shows a configuration dialog box titled "Configure" with a close button (X) in the top right corner. Below the title bar, there is a tab labeled "Advanced". Underneath the tab, the text "Command Line Parameters" is displayed. A checkbox is present, which is currently unchecked. Below the checkbox, a text input field contains the command line parameters "/qn /norestart". At the bottom right of the dialog, there are two buttons: "Save" (highlighted in blue) and "Cancel".
