

## Microsoft Teams

Last Modified on 04.16.26

In this [Application of the Week](#) blog Microsoft Teams is discussed in depth. Both from an installation and launch perspective.

Within the Setup Store we provide two MSI setups for 'Microsoft Teams': one for x86 and one for x64.

These setups are 'Machine Wide' installers. Microsoft offers 'per user' setups as well, through Office 365 as well as on the [Teams download website](#).

Unfortunately these can be installed side by side, but are different:

When a user has installed the 'per user' version, the 'machine wide' setup fails. If you want to make sure a 'machine wide' setup installs properly check for this registry key:

HKEY\_CURRENT\_USER\Software\Microsoft\Windows\CurrentVersion\Uninstall\Teams

... if that one exists, a 'per user' version of Microsoft Teams has been installed. Uninstall that instance in the user profile (!) by using:

```
"%LOCALAPPDATA%\Microsoft\Teams\Update.exe" --uninstall -s
```

or for all users using this script described in this [blog article](#) 'How to: Uninstall Microsoft Teams from ALL users on a PC'.

```
if (test-path C:\Users\*\AppData\Local\Microsoft\Teams\current\Teams.exe) { kill -name teams -force; (Get-ItemProperty C:\Users\*\AppData\Local\Microsoft\Teams\Current).PSParentPath | foreach-object {Start-Process $_\Update.exe -ArgumentList "--uninstall /s" -PassThru -Wait} }
```
