

## Oracle VirtualBox

Last Modified on 04.16.26

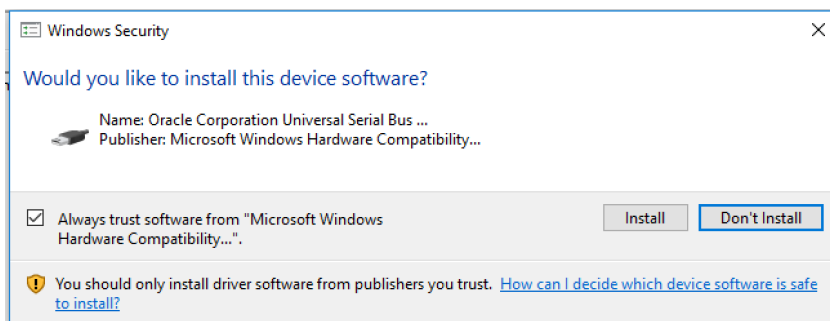

### Unattended installation

The Setup Store wizard is prefilled with the command line `-s -l -msiparams ALLUSERS=1 REBOOT=ReallySuppress VBOX_INSTALLDESKTOPSHORTCUT=0 VBOX_INSTALLQUICKLAUNCHSHORTCUT=0 VBOX_START=0`

Below are described some extra steps you have to take to install Oracle VirtualBox silently.

### Prerequisites

- Oracle Device Software – Normally when you install Virtualbox, you get an extra popup to allow the installation of Oracle Device Software. If you don't install it, the unattended installation will fail.

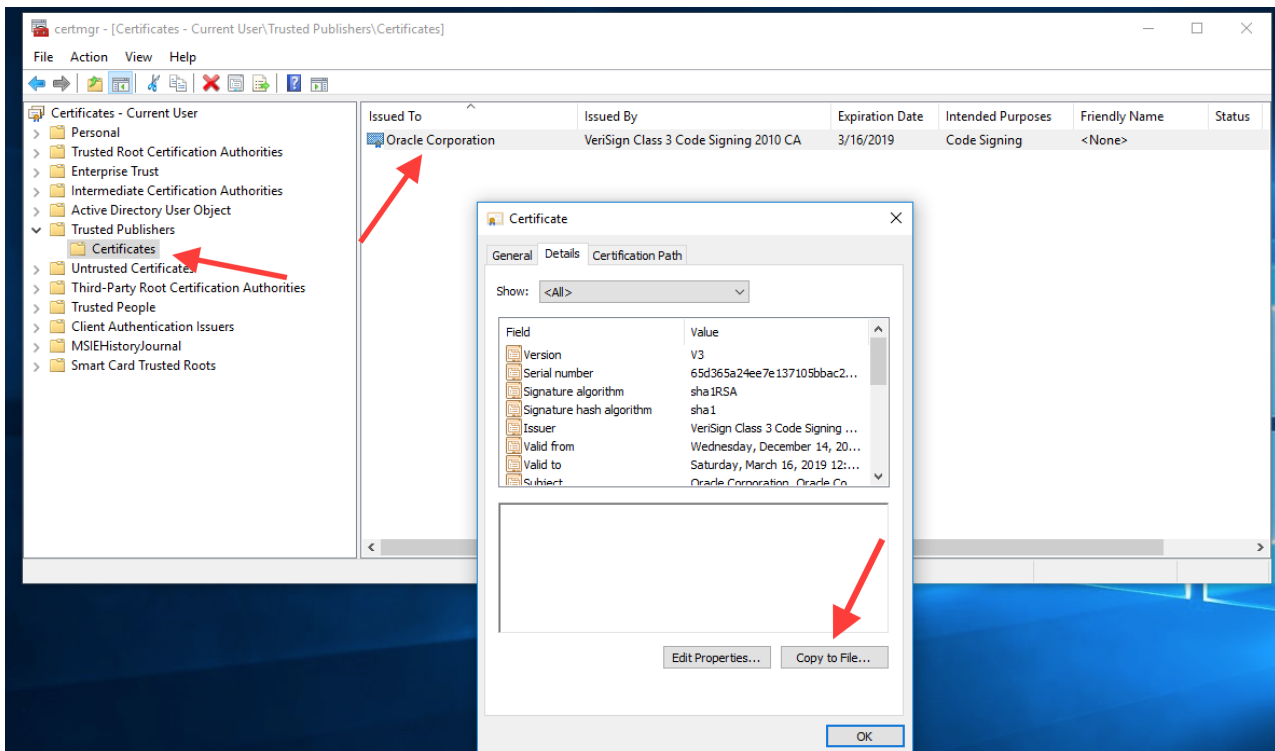

- Oracle Corporation Certificate – You have to install or inject this certificate. You can obtain this certificate on a machine where VirtualBox is installed.

### Exporting the Oracle Corporation certificate:

1. Install Virtualbox on a test machine or VM.
2. Start `certmgr.msc`
3. Locate the certificate in the **Trusted Publishers > Certificates** section.
4. Double-click the certificate.
5. Double-click the 'Oracle Corporation' certificate.
6. Click the **Details** tab.
7. Click **Copy to file**.
8. Accept the wizard defaults and choose a location and filename for the certificate.
9. Copy the `.cer` file to a place outside the test-machine.

# Recast

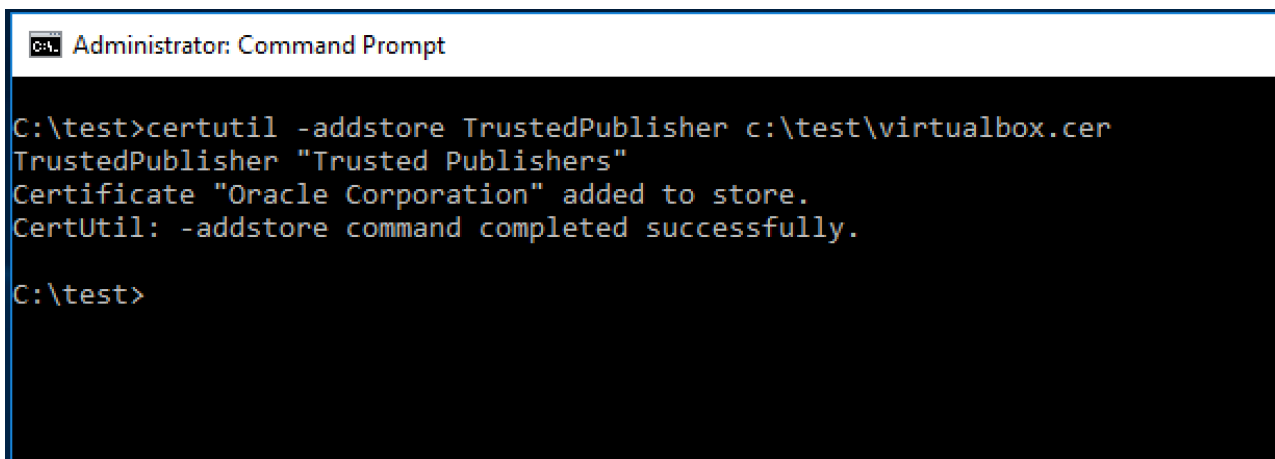

Importing the Oracle Corporation certificate:

On the machine or image where you want the certificate installed, open an elevated command prompt and type:

```
certutil -addstore TrustedPublisher [drive][path][certificate]
```

Example: `certutil -addstore TrustedPublisher c:\test\virtualbox.cer`

When the certificate is successfully installed the following message will be displayed:

You can now do a silent install of Virtualbox.
