

VMWare View Client

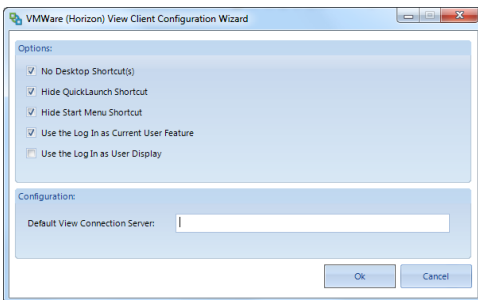

Last Modified on 2026-05-21

If you want to create an application for VMWare (Horizon) View Client, you can download it in the Application Workspace Setup Store.

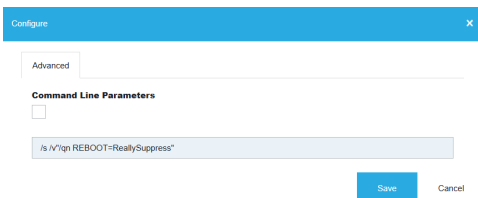

Inside the downloaded file, there is an MSI embedded.

Creating an application in Setup Commander

1. If you start the setup on a test machine, wait for the dialog screen.
2. Search on your `C:\users\[username]\AppData\Local\Temp` for the MSI. Copy that file to the location where you keep the .EXE file and cancel the installation.
3. In Setup Commander, browse to the MSI, right-click on it and choose **Create Application**.
