Liquit.Tags.List

Last Modified on 2026-08-25

The **Liquit.Tags.List** function returns all tags available to the user. Tags can be assigned to applications and help organize applications. To get insight into the assigned tags, see Liquit.Applications.List or Liquit.Applications.Get.

Return parameters

The API call returns an array with all the tags assigned to the user. These are available because they are assigned to applications that in turn are assigned to the user. Each tag will have the following properties.

Name	Description	Value
id	The unique identifier of the tag.	`<guid>`
color	The color associated with the tag, the value is a hex value for the color.	`<string>`
description	The description of the tag.	`<string>`
name	The friendly name of the tag.	`<string>`

Example

```
Liquit.Tags.List(function (result) {

    // The result object will contain an array of all tags.
      console.log(result);
});
```
