## Workspace & Catalog Context Menus

Last Modified on 04.17.26

Across your workspace, the context menu will display different elements, depending on the area and screen where you right-click.

### Workspace

Right-clicking on the **All** filter, in Side Menu, will display the following options:

**Disabled Apps** Displays or hides the disabled apps.

**Team Apps** Displays or hides the teams of which you are a member.

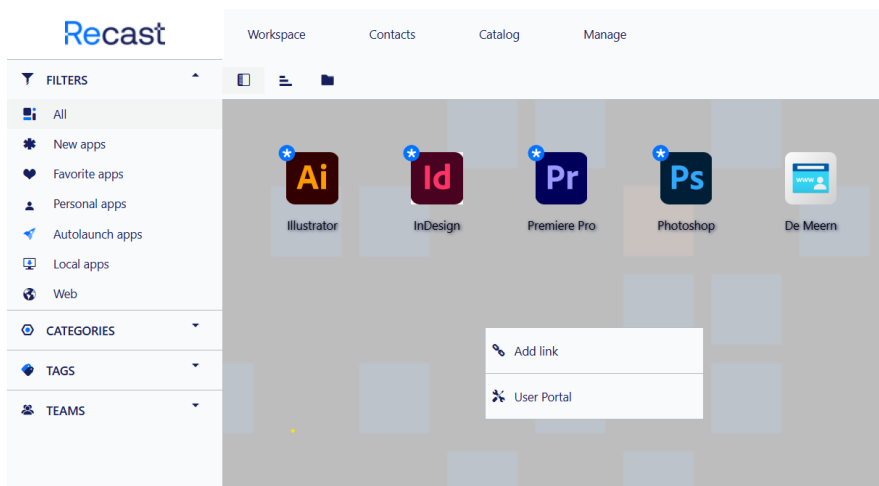

In the **Workspace** tab, right-clicking on the background area will display the following options:

**Add Link** To add a new personal application to **Workspace**.

**User Portal** To open the **User Portal** screen.

# Recast

In the **Workspace** tab, right-clicking on an icon will make several options available to you, depending on how the app is configured, meaning if it is local or from **Catalog**, or if the Repair option is enabled or not. App the possible options are described in the table below.

Icon	Name	Description
	Favorite	Adds the application to your favorite applications filter in the Side Menu.
	Edit	Opens the <b>Edit link</b> dialog box, where you can edit the details of a personal app.
	Autolaunch	Enables Autolaunch for a managed app, and adds it to the <b>Autolaunch</b> filter in the Side Menu. This feature is enabled by default for the Application Workspace Launcher. If it's not working for the web interface, you must contact your system administrator to configure it for you.
	Rename	Enables you to change the display name of the managed app.
	Catalog Information	Displays catalog information about the managed app. See <a href="#">Catalog</a> for more details.
	Repair	It is displayed only after you click on an icon that implies executing an action on your device, e.g. copying files or launching an .exe file. It will not be displayed for apps that open in the browser. Depending on how your system administrator configured it in the backend, the main purpose of this option is to run repair actions for an app; for example if an app is not functioning properly.
	Report problem	Opens the <b>Report problem with Liquit help</b> dialog box, where you can report any problem regarding the managed app to your system administrator.
	Remove	Allows you to remove the application from <b>Workspace</b> . A managed app will be moved back to the catalog, while a personal app will be permanently deleted.

## Catalog

In the **Catalog** tab, right-clicking on the background area will display the **User Portal** option to open the **User Portal** screen.

For the apps that have the **Get** or **Request** button displayed on them, the context menu will display the same option.
