

Catalog

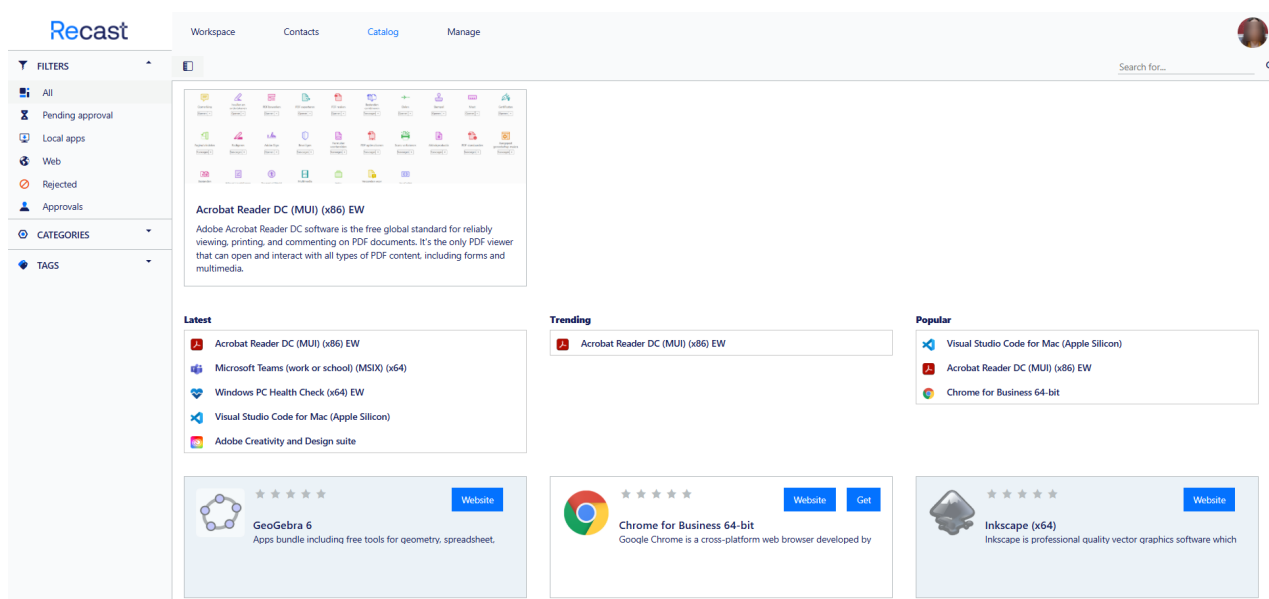

Last Modified on 04.16.26

The **Catalog** tab displays all applications made available to you by your system administrator.

To help you familiarize with the application catalog we have offered a number of options to gain insight into the applications available to you:

Featured applications

The applications featured by your organisation will be displayed at top of the catalog tab. See the Outlook app in the following image.

Predefined categories

Immediately below the featured application section, three predefined categories are displayed:

- **Latest** Apps last edited by the system administrator.
- **Trending** The most requested or got apps within last week.
- **Popular** The most requested or got apps within last month.

Filters

By default, the following filters are made available to you in the Side Menu, in order to easily find applications.

Name	Applications filtered
All	All applications
Pending approval	Only applications you have requested and have not yet been approved
Local apps	Only local applications
Web	Only applications pointing to a web address
Rejected	Only applications you have been denied access to
Approvals	This option is available to you only if you have been appointed as an approver by an administrator. This view allows you to approve, deny or ignore approval requests.

Categories

When selecting a category in the Side Menu, only applications assigned to that category will be shown. Categories are

Recast

used for a more granular organization of the applications you have access to.

Tags

When selecting a tag in the Side Menu, only applications assigned to that tag will be shown.

Tip

Only system administrators can create tags and categories and assign them to applications.

Catalog information screen

When you click on an application in the catalog tab, the catalog information screen will open. Here you can view the general details of an application, related media, FAQ, reviews and ratings given by your coworkers, all which can help you decide if the application suits your needs.

You can also add your own reviews and ratings.

Reviews

Nice app!

It loads faster than Edge.
