

Add a personal application in Application Workspace

Last Modified on 04.20.26

1. Add your own local application in one of the following ways:
 - Drag and drop the application into your workspace. This option is available only for the Application Workspace Launcher.
 - Click on the Add (+) button.
2. In the **Add link** dialog box that is displayed, select:
 - **URL** to add a hyperlink pointing to a website or a link to a file.
 - **Local** to add a local application.

Options in the Add link dialog box

General tab

Use local file icon If selected, the icon will be extracted from the application you are adding.

Path The path of the local application or file.

Advanced tab

Window Defines how the application should be started.

Directory Defines the startup directory.

Arguments Defines the startup arguments.

If the **Local** option is not available to you, please contact your system administrator.

When setting up a website application, if the browser selected in the configuration is not installed in advance, the default browser of your OS will be used.
