

## Setup Store

Last Modified on 04.16.26

### Overview

The Application Workspace Setup Store is a kind of Application Store for Windows and macOS applications. It offers 'Setups as a service', analogue to Microsoft's 'Windows as a service' strategy. From the Application Workspace Setup Store, you can easily download the most used free Windows/macOS application setups and patches to a pre-configured directory on a local drive or a file share. After a setup has been downloaded, it can easily be configured for enterprise deployment. Read the [Application Workspace Setup Store Leaflet](#) for more details.

Instead of spending time finding the correct download links for the latest versions of these most common applications, you can now easily download their setups from the Application Workspace Setup Store and build or extend your software setup catalogue. You can sort, search and filter the complete Setup Store based on Manufacturer Name, Product Name, Version Number, Setup Type, Category, Platform, Filename, Language or Date when the setup has been added to the Application Workspace Setup Store.

### Continuous growing number of entries

Over the years, our Application Workspace Setup Store has grown to more than 6000 entries. Every day the database is kept up to date with the latest versions and releases of listed setups.

### Request setup for the Application Workspace Setup Store

Some entries are added because partners and customers are suggesting them, by using the [Request Setup](#) feature.

On the other hand, some entries are added as a result of the technology partnerships with vendors like Adobe, Microsoft, Micro Focus and VMware.

When you would like us to add a new product, please feel free to use [Request Setup](#) from the Main ribbon to submit new

# Recast

suggestions.
