Configure a Firewall or Proxy Server for Setup Commander

Last Modified on 2026-11-16

If you use a proxy server, you have to edit the `Web.config` file located in `C:\Program Files (x86)\ROVABU Software BV\Setup Commander Service Portal\`

Add the following code filled with your proxy server settings:

```
<system.net><defaultProxy> <proxy usesystemdefault="true" proxyaddress="http://yourproxy:port" bypassonlocal ="true" /> </defaultProxy> </system.net>
```

For more information, check the Microsoft documentation.
