Release & Patch Management Overview

Last Modified on 2026-09-02

A Release & Patch Management add-on license offers the following:

- Development, Test, Acceptance, Production (DTAP) support for packages
- Condition Sets
- Application Workspace Setup Store connector
- Microsoft System Center Configuration Manager connector
- Dizzion Frame connector
- Microsoft Store connector
- Omnissa Horizon connector

Release & Patch Management Components

Release & Patch Management has two components:

Application Workspace Setup Store

The Application Workspace Setup Store is a proprietary curated app store containing thousands of app setups and patches available for Windows and macOS.
The Application Workspace Setup Store is available as a connector and requires the Release & Patch Management license.

Using the Application Workspace Setup Store simplifies package and patch deployment and ensures security, while the automated delivery and updates are handled for you by our team. Apps are updated in the store soon after OEM releases, once they are rigorously tested and screened for malware. This curated app store also guarantees verified sources, comprehensive vulnerability data and virus scan scores.

Learn more about the Application Workspace Setup Store Connector

Application Workspace Setup Store Notification System

The Application Workspace Setup Store Notification System sends emails containing information like release notes, patches, CVE (Common Vulnerabilities and Exposures) or the VirusTotal score for the applications you import from the Application Workspace Setup Store into your Application Workspace System.
