

Release & Patch Management Overview

Last Modified on 04.17.26

A Release and Patch Management add-on license offers the following:

- Development, Test, Acceptance, Production (DTAP) support for packages
- Condition Sets
- Full access to the Application Workspace Setup Store connector
- Microsoft System Center Configuration Manager connector
- Nutanix Frame connector
- Microsoft Store connector
- VMware Horizon connector

Components

The Release and Patch Management has three components:

Application Workspace Setup Store

The [Application Workspace Setup Store](#) is a proprietary curated app store containing thousands of app setups and patches available for Windows and MacOS.

The Application Workspace Setup Store is available as a connector and requires the Release and Patch Management license. But is also available in Setup Commander when using the MDT, ConfigMgr, Ivanti EPM or ZENworks connector.

Using the Application Workspace Setup Store simplifies package and patch deployment and ensures security, while the automated delivery and updates are handled for you by our team. Apps are updated in the store soon after OEM releases, and after they are rigorously tested and malware screened. This curated app store also guarantees verified sources, comprehensive vulnerability data and virus scan scores.

Application Workspace Setup Store Notification System

Through the Application Workspace Setup Store Notification System we send E-mails with information like release notes, patches, CVE (Common Vulnerabilities and Exposures) or VirusTotal score for the applications which you imported from the Application Workspace Setup Store into your Application Workspace System.

Setup Commander

[Setup Commander](#) enables you to prepare your own in-house applications, applications which need to be purchased or any application which can't be provided through the Application Workspace Setup Store for deployment.

What you will find in this documentation section

- How to create Application Workspace applications for various third-party applications (present in the Application Workspace Setup Store or not)
 - The applications configuration wizards
 - Recommendations and important information about the third-party applications
