Application Workspace Overview

Last Modified on 2026-07-07

With Application Workspace, every eligible end users can request or gain access to the applications made available to them from our extensive application catalog. A web portal/desktop launcher displays the application icons and allows users to personalize the look and feel of their workspace

Interfaces

- Application Workspace Downloads is where AW admins can download new versions of Application Workspace
- Application Workspace itself is a single interface that offers separate views for end users and AW administrators
    - End users will see the **Workspace**, **Catalog**, and **Contacts** tabs, as made available by the administrators
    - Admins will also see the **Manage** tab where they can configure all of Application Workspace's components

Architecture

To familiarize yourself with Application Workspace's concepts and architecture, we recommend starting with:

- Deployment Models
- Components
- Network Ports Diagram

You can also take an interactive tour of Application Workspace.

Add-on licenses

The following add-ons are available as separate licenses that can further enhance both the user experience as well as automate tasks to make it easier for the system administrator:

Access Manager

Access Manager is a completely integrated single sign-on solution that works smoothly with Application Workspace to provide simple, contextual, immediate access to hundreds of applications.

For information about identity providers and connectors, see Access Manager.

Release and Patch Management

Release & Patch Management ensures that the latest patches and updates run on devices across all applications, versions, platforms, and environments.

See Release and Patch Management
