

Application Workspace Overview

Last Modified on 04.17.26

Application Workspace removes the complexity around the delivery method of the applications and can assist you in your process of ensuring the stability, reliability, and optimal functioning of applications and other resources across company. Through the catalog of applications, every eligible user is able to request or gain access to apps in compliance with a standardized workflow.

Application icons are displayed via a customizable web portal/desktop launcher that allows users to personalize the look and feel of their workspace according to their own needs.

Read more about Application Workspace's architecture and deployment methods in the [Architecture](#) article.

Additional licenses

The following products are available as separate licenses that can further enhance both the user experience as well as automate tasks to make it easier for the system administrator:

Access Manager

Access Manager is a completely integrated single sign-on solution that works smoothly with Application Workspace to provide simple, contextual, immediate access to the hundreds of applications your business needs to keep moving.

The following features are provided with the Access Manager license:

- OAuth2 Identity Provider for SSO
- SAML2 Identity Provider for SSO
- Office 365 groups support for Azure AD Identity Source
- Okta Connector

Release and Patch Management

Release & Patch Management assists you in ensuring that the latest patches and updates run on devices across all applications, versions, platforms, and environments.

This documentation section is intended for

Administrators who are responsible for the preliminary setup and for management of Application Workspace. Proficiency in Windows and Mac operating systems, networking and infrastructure, application deployment and familiarity with security concepts and compliance requirements are also desired.
